Summary

So you need an AI Solution Architect who can walk into a room with a product engineer, a project manager, and an executive, understand the problem they're trying to solve, and walk out with a high-level AI architecture proposal that's technically sound, clearly communicated, and actually buildable, and then help make it happen? How about someone who has spent the last several years doing exactly that, embedding with organizations across industries, writing problem descriptions and requirements documents, proposing AI-based solutions, and seeing them through from architecture to production deployment? Peter Surowski is an AI solutions architect and two-time startup founder with 26 years of software engineering experience who specializes in one thing above all else: taking the best available AI technology and making it work for the people who need it. He has designed and shipped production-grade agentic AI systems, multi-agent frameworks, LLM-powered automation pipelines, and RAG architectures for enterprise clients, and he is genuinely excited about helping every engineer and executive use best-in-class AI to move faster, do more, and delight customers.

Education

Certificate
Web Development
UC Irvine, 2016

Master's Degree
Communications
CSU Fullerton, 2011

Bachelor's Degree
History
CSU Fullerton, 2006

Certificate
Multimedia Arts
Mt. San Jacinto College
2000

Random Facts!

Peter has renovated
3 abandoned
houses, a duplex,
and a triplex...
mostly by hand!

Peter has run
40 marathons...
and one ultra-
marathon!

Peter has owned and
operated two small
independent
bookstores!

Peter was in a signed
metal band that
released three
albums and went
on two world tours!

Experience

CTO & Co-Founder | Code Temple
2022 – Present | Detroit, MI

Lead architecture, design, and delivery of custom software platforms for businesses across healthcare, education, e-commerce, and professional services.

- Designed end-to-end software architectures from business discovery through deployment.
- Led technical discovery sessions with executives and stakeholders to translate business goals into scalable software solutions.
- Designed reusable React component architectures and applied Redux, Zustand, and React Query for scalable frontend state management.
- Designed API integrations connecting CRMs, payment systems, AI platforms, marketing automation tools, and third-party SaaS products.
- Implemented AI-powered customer service, sales automation, voice assistants, and internal workflow automation solutions.
- Directed distributed engineering teams while overseeing project planning, code reviews, architecture decisions, and deployment strategies.
- Built and successfully exited multiple six-figure technology businesses.
- Established frontend build and deployment workflows using Webpack, Babel, Vite, NPM, Yarn, and Jenkins.

Web Developer | Fullerton College
2019 – 2022 | Fullerton, CA

- Served as technical lead on a complete redesign of the college's public website using HTML5 and CSS3.
- Collaborated with dozens of departments to balance technical constraints with organizational priorities.
- Delivered a modern, accessible platform on an accelerated timeline.
- Improved accessibility, maintainability, analytics, and user experience.

Technical Engineer | Automattic (WordPress.com)
2017-2019 | Remote

- Drove large-scale infrastructure modernization across a globally distributed engineering organization — migrating 1,200+ production workloads to multi-region Kubernetes clusters, reducing deployment times by 85% and demonstrating the ability to architect and execute transformational technical programs inside a large engineering org.
- Collaborated with engineering teams across three continents to coordinate complex technical programs, troubleshoot production incidents, and influence departments outside his own to achieve shared outcomes — the same cross-functional leadership this role requires.
- Built automation tooling that eliminated manual processes and accelerated engineering velocity — an early example of the efficiency, speed, and quality improvements the PDT AI Solutions team is chartered to deliver.

Experience (cont.)

Web Developer | University of Redlands

2018 – 2019 | Redlands, CA

- Planned migration strategy and information architecture.
- Coordinated QA, deployment, and stakeholder communication.
- Designed a modern, responsive university website focused on usability and accessibility.

Web Editor/Digital Journalist | The Press-Enterprise

2012 – 2016 | Riverside, CA

- Managed website, increased subscriptions more than 10% even as print subscriptions declined
- Reported, photographed, and produced multimedia news. for online publication

Web Properties Manager | AOL

2010 – 2012 | Beverly Hills, CA

- Managed technical operations for more than a dozen high-traffic web properties. Improved performance, scalability, SEO, and operational efficiency through data-driven technical improvements.
- Collaborated with engineering, editorial, and business teams to deliver measurable business outcomes.

Webmaster | M2 Media Group

2008 – 2010 | Remote

- Redesigned websites for portfolio of magazine websites, reducing bounce rate by 60% and increasing daily traffic by more than 20%

Freelance Web Developer

1998 – 2008 | Southern California

- Designed and developed early-era websites for small businesses.
- Specialized in front-end design, layout, and early e-commerce.

Skills

- **Solution Architecture:** Enterprise Solution Design, Systems Architecture, Technical Discovery, Requirements Analysis, Integration Strategy, API Architecture, Distributed Systems, Microservices, Cloud Architecture, Data Architecture, Event-Driven Systems, Performance Optimization
- **Software Engineering:** JavaScript, TypeScript, Python, Flask, PHP, Laravel, Java, Springboot, React, Angular, Node.js, Django, Flask, Spring Boot, SQL, PostgreSQL, MongoDB, GraphQL, REST APIs, CRUD, HTML5, CSS3, JavaScript ES6+, Redux, React Query, React Native, Webpack, Vite, Next.js, NPM, Yarn, NPM, e Jest, PyTest, BASH, CRM, LMS
- **AI Solutions:** Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Agentic AI, Multi-Agent Systems, Prompt Engineering, MCP Servers, LangChain, AI Workflow Automation, Conversational AI
- **Cloud & DevOps:** Docker, Kubernetes, CI/CD, Git, GitHub, Linux, NGINX, Firebase, DevOps Practices, Google Cloud Platform, Cloud Run, Jenkins

Skills (cont.)

- **Professional Skills:** Solution Consulting, Stakeholder Communication, Executive Presentations, Cross-functional Leadership, Technical Roadmapping, Agile Delivery, Risk Analysis, Vendor Evaluation, Mentoring, Client Success

Selected Project Highlights

AI Business Automation Platform

- Designed AI-powered customer support, appointment scheduling, lead qualification, and sales automation systems using Large Language Models and Agentic AI to reduce operational costs while improving customer experience.

Enterprise Website Modernization

- Architected large-scale public websites for higher education institutions, balancing semantic HTML, web accessibility, governance, content strategy, performance, and stakeholder requirements.

Enterprise Integrations

- Designed and implemented integrations connecting payment systems, CRMs, AI services, marketing platforms, analytics platforms, and custom business software through secure REST APIs and automation workflows.
